

# CABLE CAR WORLD

home of new urban mobility

Cable Car World is the world's first exclusive forum for new urban mobility with urban cable cars. The two-day trade fair with integrated congress will take place from **21-22 June 2022** as a presence event. It is under the patronage of the German Federal Ministry for Digital and Transport. The venue is **Messe Essen** in the centre of the Metropole Ruhr, Germany's largest urban conurbation.

The starting point is the numerous considerations in Germany to also use urban cable cars in public transport in the future. While traffic at the terrestrial level is stagnating, the focus in Europe and worldwide is increasingly on the **plus-one level**. This is where cable cars operate, which are considered one of the safest means of transport and have been reliably in use at many locations for decades.

Despite many **advantages**, such as a short construction time or a positive environmental balance and the worldwide use of cableways in urban areas, they are still a **novelty** as a component of public transport in Germany. A lack of know-how, legal ambiguities, or difficulties in gaining acceptance have so far been considered obstacles to implementation. Yet it is above all the simple overcoming of the zero level that promises new connections and relations in the urban context as well as **new possibilities** for the use of space.

It is now time to bring together the various players to discuss how opportunities can be seized and obstacles overcome in the implementation of urban cable cars. At the Cable Car World, all those interested in this topic will be given the opportunity to inform themselves about the **perspectives** of this urban means of transport and to exchange ideas. For this purpose, two days of **lectures** by experts from science and practice as well as **panels** on the most relevant topics will be held. In addition, **exhibition areas** for manufacturers, the supplier industry, cities, and regions create space for profitable knowledge transfer and the presentation of their own projects and products.
